This two-day course is a first component of a two-part series covering, in detail, aspects of the technology and science of roofing. It covers the history and evolution of roofing up to present-day common applications. It features terminology and technical information regarding roof decks and structures, roof insulation, bitumen membranes, built-up and modified bitumen membranes and flashing systems. An understanding of heat transfer theory, moisture, thermal design, and the calculation of U-factors will also be presented.

Highlights of the program include:

- Critical aspects of roof decking and related supporting structures.
- Heat transfer and practical heat transfer calculations.
- The function of heat transfer and the different types of roof insulation.
- Technology behind roofing bitumen's & related BUR and MB membranes.
- Basic flashing nomenclature and bituminous flashing system construction.
